Burpee Natural and Organic Premium GardenCoir

Burpee Eco-Friendly Natural & Organic GardenCoir is a sustainable and renewable soil amendment made from coconut fiber. An ideal amendment for custom blend growing mixes for raised garden beds, container gardening and seed starting.

How To Use:

SEED STARTING & CUTTINGS:

Burpee eco-friendly Natural & Organic GardenCoir is perfect for starting all types of vegetable, herb and flower seeds. Use GardenCoir by itself or create a custom seed starting mix by blending with Burpee Vermiculite or perlite, keeping coir at least 50% of the total mix.

INDOOR & OUTDOOR CONTAINERS:

For an ideal container growing mix, blend 2-3 parts Burpee GardenCoir with 1 part Burpee Vermiculite or perlite. For a slightly heavier mix for large containers, add 1-2 parts organic compost. Lighten up any pre-mixed potting mix by simply adding 1 part Burpee GardenCoir to 1 part pre-mixed potting mix.

RAISED GARDEN BEDS:

Burpee GardenCoir is an excellent natural and organic ingredient for all raised garden beds, especially when growing vegetables & herbs. For a high quality mix, blend 1 part Burpee GardenCoir to 3 parts organic compost. Mix thoroughly before planting for best results.

IN-GROUND GARDENING:

When growing vegetables or flowers in native soil, improve growing conditions by blending 1 part Burpee GardenCoir and 1 part native soil. Mix thoroughly before planting for best results.

HYDROPONICS:

Coconut coir is recommended as an excellent soilless medium for hydroponic gardening. Use Burpee GardenCoir by itself or incorporate 3 parts GardenCoir with 1 part Burpee Vermiculite or perlite.

NEWLY SEEDED LAWNS:

Burpee GardenCoir is a perfect top-dressing when planting grass seed. After spreading grass seed and starter lawn fertilizer as recommended, top-dress the planting area with a thin layer of Burpee GardenCoir. This will keep the seed in place and provides for an excellent seed-growing environment, especially in hot and dry conditions.
