

## The Gold Standard of Recycled Rubber

- Easy installation for maintenance-free landscaping
- Made from environmentally-friendly materials approved by the EPA
- The perfect edging for flower beds, gardens, sidewalks, driveways & more
- Mower guide design eliminates the need for trimming
- Made in the USA from 100% recycled rubber

# Rubberific Cobblestone Landscape Edging

With the flexibility of rubber and the look of stone, the Rubberific cobblestone edger will make both your landscape more beautiful and your life easier. Providing a neat, professional look, this cobblestone edging is ideal for flower beds, gardens, patios, sidewalks, driveways and other exterior areas of your property.

## Installation Instructions:

**PLACE:** Place the landscape edging on the ground where it will be installed.

**PREPARE GROUND:** Remove the edging and make sure the edging installation area is free from grass and debris. Level the dirt where the edging will be anchored to insure a consistent and level look.

**ANCHOR:** For the best results during this step, we recommend having two people for installation. Starting at one end of the edging, hammer one of the included stakes through the pre-drilled hole using a rubber mallet. The head of the stake should be flush with the top of the edging.

Have the second person bend the edging while the other secures the center of the edging with another stake. Finally, secure the other end with the remaining stake. Repeat the process until all edging is installed.

*Note: We do not recommend using a traditional metal hammer as it may damage the stakes.*

**CUTTING:** If necessary to make a cut, use a hacksaw with a miter box for best results. Always wear safety glasses when cutting material.
