

The Gold Standard of Recycled Rubber

- Made from recycled rubber and plastic in the USA
- Great for roadways, sidewalks, driveways, flooring, parking lots, patios, and curbs
- USDA testing found that a rubber expansion joint is far less susceptible to termite penetration than other expansion joints
- Meets or exceeds: ASTM D1751-04, D1752-04a and D994 AASHTO M-213-95 and M-153-98
- 4" x 60" x 3/8"

Rubberific Expansion Joint

Rubberific rubber expansion joint filler is made from 100% post-consumer rubber & plastic. The majority of the rubber comes from old tires that you see littering the shoulders of highways and overflowing landfills. When using the Rubberific Expansion Joint in the construction of just one single family residence, builders are able to consume the equivalent of 8.3 passenger car tires.
