

Premium Rubber 4 Foot Brickface Landscape Edging

The Smarter Way to Edge

Made from 100% recycled rubber, GroundSmart Brickface Landscape Edging is the perfect edging for flower beds, gardens, sidewalks, driveways and more. The flexible rubber edging will contour to any landscape and provide any project with a finished look. Featuring a mower guide design, this landscape edging eliminates the need for trimming.

The flexible rubber protects and contains your garden, landscaping and flowerbeds, making your landscape more beautiful and your life easier. Each piece of landscape edging is 4 feet. All installation hardware is included, and installation only takes minutes!

Installation Instructions

PLACE: Place the landscape edging on the ground where it will be installed.

PREPARE GROUND: Remove the edging and make sure the edging installation area is free from grass and debris. Level the dirt where the edging will be anchored to insure a consistent level look.

ANCHOR: For the best results during this step, we recommend having two people for installation. Starting at one end of the edging, hammer one of the included stakes through the pre-drilled hole using a rubber mallet. The head of the stake should be flush with the top of the edging.

Have the second person bend the edging while the other secures the center of the edging with another stake. Finally, secure the other end with the remaining stake. Repeat the process until all edging is installed.

Note: We do not recommend using a traditional metal hammer as it may damage the stakes.

CUTTING: If necessary to make a cut, use a hacksaw with a miter box for best results. Always wear safety glasses when cutting material.
