

# Expansion Joints

**Durable, Flexible Solutions for Long-Lasting Concrete Protection**

GroundSmart rubber expansion joint filler is made from 100% post-consumer rubber & plastic. The majority of the rubber comes from old tires that you see littering the highways and overflowing landfills. When using the GroundSmart Expansion Joint in the construction of just one single family residence, builders are able to consume the equivalent of 8.3 passenger car tires.

## Installation Instructions:

- Made from recycled rubber and plastic in the USA
- Great for roadways, sidewalks, driveways, flooring, parking lots, patios, and curbs
- USDA testing found that a rubber expansion joint is far less susceptible to termite penetration than other expansion joints

Meets or exceeds: ASTM D1751-04, D1752-04a and D994 AASHTO M-213-95 and M-153-98

Dimensions: 4" x 60" x 3/8"
